

## INDO-EUROPEAN $*g^w h$ IN GERMANIC

KRZYSZTOF TOMASZ WITCZAK

**ABSTRACT:** Krzysztof Tomasz Witczak. *Indo-European  $*g^w h$  in Germanic*. Lingua Posnaniensis, vol. LIV (2)/2012. The Poznań Society for the Advancement of the Arts and Sciences. PL ISSN 0079-4740, ISBN 978-83-7654-252-2, pp. 83–90.

Purpose and method: In my paper I discuss the development of IE.  $*g^w h$  in the Germanic languages, using the historical-comparative method. Results: Two regular reflexes of IE.  $*g^w h$  in Proto-Germanic ( $*g$  and  $*w$ ) can be explained by the place of the Indo-European accent, e.g. Gmc. *\*garmaz* m. ‘fire dog’ (< IE.  $*g^w hóm̥os$ ) vs. Gmc. *\*warmaz* adj. ‘warm, hot’ (< IE.  $*g^w hóm̥ós$ ); Gmc. *\*dagaz* m. ‘day’ (< IE.  $*dhog^w hós$ ) vs. Gmc. *\*snaiwaz* m. ‘snow’ (<  $*snóig^w hos$  m. ‘snow’). Conclusion: The double distribution of IE.  $*g^w h$  in Proto-Germanic, which is motivated by the primitive accent, can be described as a rule similar to *das Vernerische Gesetz*.

Krzysztof Tomasz Witczak, Department of Linguistics and Indo-European Studies, Faculty of Philology, University of Łódź, Lipowa 81, PL – 90-568 Łódź, krzysztof.tomasz.witczak@gmail.com; ktw@uni.lodz.pl

### INTRODUCTION

As far as I know, there occur three reflexes of IE.  $*k^w$  in the Germanic languages:

[1] IE.  $*k^w$  > Gmc.  $*hw$  in the initial position and medially after the stress, e.g. Gmc. *\*hwalaz* m. ‘a big fish; whale’ > ON. *hvalr*, Icel. *hvalur*, OE. *hwæl*, E. *whale*, OHG. (*h)wal* m. ‘Walfisch’, *walira* f. ‘Wels’, late MHG. *wels* (s-stem) ‘id.’ (cf. SEVILLA RODRÍGUEZ 1989: 177–180; KLUGE, SEEBOULD 1999: 872); IE.  $*ékwos$  m. (cf. Skt. *ásvah*) ‘horse’ > Gmc.  $*éhwaz$  m. ‘id.’ > Goth. *aihwa-*, OSax. *ehu-*, OE. *eoh*, ON. *jór* ‘horse’ (DE VRIES 1977: 293; LEHMANN 1986: 15, 100; BLAŽEK 1999: 23).

[2] IE.  $*k^w$  > Gmc.  $*gw$  >  $*w$  or  $*g$  in the medial position before accent, e.g. Gmc. *\*tegwáz* ‘slave’ > Goth. *þiwbōs* m. pl. ‘slaves’, ON. *pewaR* ‘Lehnsmann’, cf. OInd. *takvá-* adj. ‘quick’ (LUBOTSKY 1988: 95); Gmc. *\*wulgwéz* f. ‘she-wolf’ > ON. *ylgr* f. ‘id.’ (DE VRIES 1977: 677), cf. Skt. *vṛkñih* f. ‘she-wolf, female jackal’.

[3] IE.  $*k^w$  > Gmc.  $*f$  in some irregular cases, e.g. Gmc. *\*fimfi* ‘five’ beside Skt. *páñca* ‘5’, Gk. Att. *πέντε* ‘id.’ (< IE.  $*pénk^w e$ ), *\*fimftaz* ‘fifth’ beside Gk. *πέμπτος* ‘id.’ (< IE.  $*penk^w tos$ ), *\*wūfaz* m. ‘wolf’ beside Skt. *vṛkaḥ* ‘id.’ (< IE.  $*yúk^w os$ ).

It is possible to demonstrate that these three reflexes can be attested in one and the same word, cf. IE. *\*uk<sup>w</sup>nos* m. ‘oven’ > [1] *\*uhwnaz* (Goth. *auhns*), [2] *\*ugwnáz* (OSwed. *oghn*) and [3] *\*úfnaz* m. ‘id.’ (ON. *ofn*, OE. *ofen*, OHG. *ofan*) (ЗАЛИЗНЯК 1964: 226, No. 39.7).

Elmar SEEBOLD (1967; 1980) finds, by analogy, three continuations of IE.  $*g^u\text{h}$  in Common Germanic:  $*g-$  (e.g. *\*gínpiō* f. ‘fight’),  $*w-$  (e.g. *\*warmaz* adj. ‘warm’) and  $*b-$  (e.g. *\*bedjan* ‘bitten’, as if from IE. *\*g<sup>u</sup>hedh-* ‘bitten, begehrēn’)<sup>1</sup>. If  $*b-$ , as well as  $*f-$ , is the result of an irregular development, then the regular distribution of the reflexes  $*g-/ *w-$  (both from IE. *\*g<sup>u</sup>h*) should be explained by analogy to the continuation of IE.  $*k^u$ . The alternation between West Germanic *\*baumaz* m. ‘tree, trunk’ (OE. *beam*, OSax. *bom*, OHG. *boum*) and North Germanic *\*bagmaz* m. ‘id.’ (Goth. *bagms*, OIcel. *baðmr*, OSved. *bagn*; ЗАЛИЗНЯК 1964: 226, No. 39.1), analogical to *\*úhwnaz / \*ugwnáz / \*úfnaz*, clearly demonstrates that this distribution must be connected most likely with the position of the Indo-European and Proto-Germanic stress.

In the following survey of the material I shall attempt to include those examples, for which a reconstruction with  $*g^u\text{h}$  seems reasonably well founded and which possess some accentually valuable equivalents in other Indo-European languages, especially in Sanskrit, Greek and Balto-Slavic.

## 1. REFLEXES OF IE. $*g^u\text{h}$ IN THE INITIAL POSITION

In my opinion, there are only two different reflexes of IE.  $*g^u\text{h}$  in the initial position, namely Gmc.  $*g$  and  $*w$ . These two reflexes occur in some related pairs of the Germanic words, e.g. *\*garmaz* m. ‘fire dog’ vs. *\*warmaz* adj. ‘warm, hot’ (both from IE. *\*g<sup>u</sup>hormos*), OIcel. *gandr* adj. ‘monster, magic’, also m. ‘wand’ vs. Dan. dial. *vann*, E. *wand* ‘magic staff’, Goth. *wandus* ‘rod, twig’, OIcel. *vondr* m. ‘id.’ (from Gmc. *\*gandaz* adj. ‘monster, magic’ next to Gmc. *\*wandaz / \*wanduz* m. ‘wand, magic staff’). Taking into account these Germanic facts MARKEY (1980: 287) suggested “an apparently arbitrary alternation of *g*-/*w*- as reflexes initially before *a*”. In my opinion, the observed alternation is not “arbitrary”, but it is caused by a regular continuation of the Proto-Germanic variation of the original Indo-European accent. Examples discussed below seem relevant both from the etymological point of view and the accentological one.

## 2. EVIDENCE FOR IE. $*g^u\text{h} >$ GMC. $*g$

2.1. Gmc. *\*garmaz* m. ‘fire dog’ (cf. OIcel. *garmr* m. ‘hound of Hell, fire dog’, only in skaldic usage; Far. *garmur* ‘dog’, etc.) < IE. *\*g<sup>u</sup>hórm̥os* m. ‘the fiery one’ (whence ‘dog of hell’). This term seems to reflect an oppositional accentuation to the Germanic adjective *\*warmáz* < IE. *\*g<sup>u</sup>hormós* (see No. 3.1.). The same accentological opposition between a proper name and a corresponding appellative may be found in most Indo-European lan-

<sup>1</sup> SPEIRS (1978: 1) notes that “the reflexes of PIE *\*gh<sup>u</sup>* in Germanic are still a matter of controversy”. RINGE (2006: 105–116) adopts some SEEBOLD’s solutions, stressing that he has “tried to use only relatively certain examples as evidence”. According to him, PIE. *\*gh<sup>u</sup>* became Gmc. *\*b* in the initial position, except “when it had already been delabialized by a following *\*u*”. However, examples for this development are rare and highly uncertain, as stressed by POLOMÉ (1987: 306–307) and RINGE (2006: 106). In my opinion, Gmc. *\*b-* appears to represent an irregular reflex of IE. *\*gh<sup>u</sup>*, as well as Gmc. *\*f*(or *\*b*) seems an unexpected continuation of IE. *\*k<sup>u</sup>*, see also MAKAEV (1962: 26). Most recently JOHNSEN (2007) has followed Seebold’s way of thinking, which seems unfruitful.

guages, e.g. Gk. PN Φαῖδρος vs. adjective φαῖδρός ‘clear, brilliant’, Gk. PN Φρίξος vs. adjective φριξός ‘standing on end, bristling’.

2.2. Gmc. *\*gadja* n. ‘Sinn’ (cf. Olcel. *geð* n. ‘mind, mood, spirits’, also ‘wits, disposition’, Norw. *gjed*, Dan. dial. *gied*; DE VRIES 1977: 159; POLOMÉ 1987: 305, 308) < IE. *\*gʷʰhódhjōm* < IE. *\*gʷʰhedh-* ‘bitten, begehren, wünschen’ (POKORNY 1959: 488; LIV 2001: 217), cf. Greek πόθος m. ‘longing after, yearning, fond desire, regret’. See also OIr. *guide* f. ‘prayer’ (< Celtic *\*godīā*) and Gk. ἐπί-ποθία f. ‘a longing after’ (< IE. *\*gʷʰhódhijā* with a retraction of the stress). An oppositional oxytone accent is seen in Gk. ποθή f. ‘fond desire, longing, want’.

2.3. Gmc. *\*gelda* n. ‘payment’ (cf. Goth. *gild* n. ‘tax’, Olcel. *gjald* n. ‘payment, recompense, punishment’; OE. *gyld*, *gield* ‘payment, service, substitute, sacrifice’; OFris. *jeld* ‘Kaufpreis’; OSax. *geld* n. ‘Vergeltung, Lohn’; OHG. *gelt* m. or n. ‘payment, reward, sacrifice’, G. *Geld* n.; ЗАЛИЗНЯК 1963: 140, No. 4.24; LEHMANN 1986: 155; KLUGE, SEEBOLD 1999: 309) < IE. *\*gʷʰhéldh-o-m* n. ‘payment’ (see POKORNY 1959: 436), cf. Gk. τέλος n. (es-stem) ‘debt, payment due’ (< \*gʷʰéλθος and IE. *\*gʷʰhéldh-os-* n.).

2.4. Gmc. *\*gúnbiz* f. ‘fight, combat’ (cf. Olcel. *gunnr*, *guðr* f. ‘fight, killing’, OE. *gūð* ‘combat’, OHG. *gund-fano* ‘battle-flag’; DE VRIES 1977: 195; POLOMÉ 1987: 308; RINGE 2006: 92) < IE. *\*gʷʰhptis* f. (i-stem) ‘fight, killing’, cf. Lith. *gintis* f. ‘defence, fighting’ (2 AP appears in dialects, 4 AP in the literary Lithuanian). A Sanskrit equivalent is attested with no stress: *hatih* f. (i-stem) ‘striking, a stroke or blow; killing, destroying, destruction’ (MONIER-WILLIAMS 1999: 1287), though POKORNY (1959: 492) under the heading *\*gʷʰhen-* ‘schlagen’ gives a form with the oxytone stress *hatih* f. ‘das Schlagen, Schlag, Multiplikation’. The barytone stress is firmly reconstructed after the Germanic data (the preservation of *\*þ* after stress according to Verner’s law).

2.5. Gmc. *\*gúnþjō* f. ‘fight’ (cf. OSax. *gūðea* f. ‘Kampf, Schlacht’; DE VRIES 1977: 195) < IE. *\*gʷʰhptiā* f. (ā-stem), cf. Skt. *hatyā-* f. ‘killing, slaying, slaughter’ (MONIER-WILLIAMS 1999: 1287).<sup>2</sup> The original barytonesis can be reconstructed on the basis of the Germanic lexical material.

### 3. POSSIBLE EVIDENCE FOR IE. *\*gʷʰh* > GMC. *\*w*

3.1. Gmc. *\*warmaz* adj. ‘warm’ (cf. Olcel. *varmr* adj. ‘warm’, Norw., Swed. and Dan. *varm*, OE. *warm*, E. *warm*; OSax. *warm*, OHG. and G. *warm* ‘id.’; DE VRIES 1977: 646) < IE. *\*gʷʰhormós* adj. ‘hot, warm’, cf. Skt. *gharmáh* m. ‘glot, heat’ (LUBOTSKY 1988: 89), Pashto *yarmá* f. ‘noon, heat of the sun’, also ‘sun’ in some dialects (ДЫБО 1974: 81, 83; MORGENSTIERNE 2003: 32); Greek θερμός adj. ‘hot, warm’, θερμόν n. ‘heat’, θερμά n. pl. o-stem ‘hot baths’ (< IE. *\*gʷʰhermós* adj. ‘hot, warm’ < IE. *\*gʷʰher-* ‘to warm’; POKORNY 1959: 493–495; LIV 2001: 228–229). Other related terms (e.g. Lat. *formus* adj. ‘warm, hot’, Toch. B *śarme* ‘id.’) are accentologically irrelevant.

3.2. Gmc. *\*wada* n. ‘ford’ (cf. Olcel. *vaðn* ‘ford, a shallow place in water’, Norw., Swed., Dan. *wad*; OE. *wæd* ‘water, sea’; OHG. *wat* ‘ford’; DE VRIES 1977: 637) < IE. *\*gʷʰ[h]adhóm*

<sup>2</sup> POKORNY (1959: 492) gives the accented form *hatyā* (spät!) ‘Tötung’, which is not attested in the literary sources. See also LUBOTSKY (1988). However, SEEBOLD (1967: 105) refers to the Vedic compound *muṣṭi-hatyā* f. ‘Faustkampf’.

n. ‘ford’, cf. Skt. *gādhám* n. ‘ford, shoal’. See also Lat. *vādum* n. ‘shallow, shoal, ford’. The terms in question derive from the Proto-Indo-European root \**gʷeh₂-* ‘to go’ (POKORNY 1959: 463–464; LIV 2001: 205) accompanied by the determinative \*-dh-. The verbal root (PIE.) \**gʷeh₂-dh-* is perfectly attested in Lat. *vādō* and Skt. *gādhám*, whereas the Proto-Indo-European variant \**gʷh₂-e-dh-* is seen in Germanic \**wada* and Latin *vādum*. It is obvious that the initial phoneme \**w-* of the Germanic forms derives from the secondary phoneme \**gʷh-*, created from PIE. \**gʷ* by influence of the laryngeal \**h₂*.

3.3. Gmc. \**wahsaz* adj. ‘pointed’ (cf. OHG. *wahs* adj. ‘scharf, spitzig’) < IE. \**gʷhoksós* or \**ghyoksós* adj. ‘id.’, cf. Greek φοξός adj. ‘pointed, peaked in head’ (so SEEBOLD 1967: 111, 1980: 473–474 after FICK 1891: 348). All the Greek (and Indo-European) adjectives ending with -so- show the oxytone stress, e.g. Gk. καμψός adj. ‘crooked, bent’, φριξός adj. ‘standing on end, bristling’ (CHANTRAINE 1968–1977: 1221–1222).

3.4. Gmc. \**wība* n. ‘woman, wife’ (cf. OIcel. *víf* n. ‘woman, weif, lady’; OE. *wif*, E. *wife*; OSax. *wīf*; OHG. *wīb*, G. *Weib* n.; ЗАЛИЗНЯК 1963: 145, No. 4.78; DE VRIES 1977: 661; KLUGE & SEEBOLD 1999: 879) < IE. \**gʷhīpóm* n. ‘shame’, cf. Toch. A *kip*, B *kwipe* ‘shame, pudenda’ (HILMARSSON 1996: 208–211). The original oxytone accent is confirmed by Verner’s law (IE. \**p* > Gmc. \**b* before stress).

3.5. Gmc. \**wambō* f. ‘belly’ (cf. Goth. *wamba* f. ‘womb, belly’; OIcel. *vom̥b*; OE. *wamb*, E. *womb*; OFris., MLG. *wamme*; OHG. *wambo*; G. dial. *Wamme, Wampe*; ЗАЛИЗНЯК 1963: 148, No. 7.19; SEEBOLD 1980: 470–471; LEHMANN 1986: 393; KLUGE & SEEBOLD 1999: 874) < IE. \**gʷhombhá* f. ‘belly, womb, vulva’, cf. Skt. *gabhadhá* m. ‘vulva’ (MONIER-WILLIAMS 1999: 346), as if from IE. \**gʷhm̥bhós* m. ‘id.’.

Further examples for the development of IE. \**gʷh-* to Gmc. \**w-* are disputable etymologically and uncertain accentologically. Gmc. \**wōþiaz* adj. ‘pleasant, sweet’ (Goth. *dauns wōþi* ‘sweet smell’, OE. *wēðe* adj. ‘sweet, pleasant’, OHG. *wuodi* adj. ‘sweet, mild’, OIcel. *þōri* ‘better’; SEEBOLD 1967: 110, POLOMÉ 1987: 309) appears to be related to the Greek gloss φώτιον · προσφιλές, ἡδύ (‘pleasant, sweet’), which is attested in the Hesychian glossary (VI cent. AD). The gloss in question is given without ethnic reference, thus it is uncertain whether initial φ- represents a dialectal rendering of the Greek digamma (like in Pamphylian) or a regular Greek reflex of IE. \**bh* or perhaps IE. \**gʷh*. Theoretically, the suggested Greek-Germanic isogloss, which seems impeccable from the semantic and accentual point of view, could derive from IE. \**gʷhōtijos* or \**ghyōtijos*, but I would prefer a reading of the letter φ- as a Pamphylian rendering of Common Greek \**F-* (cf. Gk. Pamph. φίκατι ‘twenty’ < Gk. \**Fíkātì* < IE. \**ułk̥nti* ‘20’). In this case an alternative derivation from IE. \**ułtijos* adj. ‘pleasant, sweet’ is highly probable, whereas a root connection with OInd. (RV) *vāmāḥ* adj. ‘lovely, dear, pleasant, agreeable, fair, beautiful, splendid, noble’ (as if from IE. \**uō-mō-s*) cannot be excluded (cf. DE VRIES 1977: 684).

To the best knowledge of mine, the Germanic languages demonstrate two regular reflexes of IE. \**gʷh* in the medial position, namely -*g-* (see 4.1–6) and -*w-* (see 5.1–4). In other words, the same distribution is attested in the Germanic languages both initially and medially. It is obvious that the twofold Germanic development of IE. \**gʷh* had to be determined by position of the Proto-Germanic (Indo-European) accent.

4. POSSIBLE EVIDENCE FOR -g<sup>w</sup>h- > GMC. -g-

4.1. Gmc. \*dagaz m. ‘day’ (cf. Goth. *dags*, OIcel. *dagr*, E. *day*, OSax. *dag*, OHG. *tag*, G. *Tag* ‘day’; ЗАЛИЗНЯК 1963: 130, No. 1.12; DE VRIES 1977: 71–72; LEHMANN 1986: 86) < IE. \*dhog<sup>w</sup>hós m. ‘hot weather’, cf. Lith. *dāgas* m. ‘heat of day, harvest’ 4 AP (ILICH-SVITYCH 1979: 30, Sect. 10), Skt. *ni-dāgháḥ* m. ‘heat, warmth; the hot season (May and June), summer; internal heat’ (MONIER-WILLIAMS 1999: 548). The Indo-European appellative is a derivative from the root \*dheg<sup>w</sup>h- ‘to burn, to warm’ (POKORNY 1959: 240; WATKINS 1970: 1512; LIV 2001: 133–134).

4.2. Gmc. \*sangaz m. (o-stem) ‘song’ (cf. OIcel. *songr* m. ‘song, music, melody, priest’s poem’, OE. *sang*, E. *song*, OSax. *sang*, OHG. *sang*, cf. Gothic *saggws* m. i-stem ‘Gesang’; ЗАЛИЗНЯК 1964: 188, No. 26.26; DE VRIES 1977: 578) < IE. \*song<sup>w</sup>hós m. ‘voice, sound, song’, cf. Greek ὄμφη f. ‘voice, sound’ (< IE. \*song<sup>w</sup>há f. ‘id.’).

4.3. Gmc. \*angaz m. (o-stem) ‘smell’ (cf. OIcel. *angr* m. ‘Duft, Geruch’; DE VRIES 1977: 10) < IE. \*ong<sup>w</sup>hós, cf. Gk. *dial.* ὄμφη f. ‘smell’ (< IE. \*ong<sup>w</sup>há f. ‘id.’). The same root \*ong<sup>w</sup>h- may be found in Common Slavic \*qchъ m. ‘smell’ (cf. Pol. *węch* ‘sense of smell’) (< \*ong<sup>w</sup>h-só-) and \*qchatи vb. ‘to smell’ (cf. Pol. *wąchać* ‘to smell’) (an extension on -s- from the Indo-European root \*ong<sup>w</sup>h-).

4.4. Gmc. \*wagjaz m. ‘wedge’ (OIcel. *veggr* m. ‘Keil’; OE. *wecg*, E. *wedge*; OSax. *veggi*, OHG *weggi*, *wecki* m. ‘wedge’; ЗАЛИЗНЯК 1964: 214, No. 31.14; SEEBOLD 1967: 128–129; DE VRIES 1977: 650) < IE. \*yog<sup>w</sup>híós, cf. Lith. *vāgis* m. ‘wedge’ (4 AP in the dialects, but a secondary 2 AP occurs in the standard language), Latvian *vadzis* m. ‘wedge’ (FRAENKEL 1962–1965: 1179). The nominal root \*yeg<sup>w</sup>h- ~ \*yog<sup>w</sup>h- is attested in Greek (Hesychian) ὁφνίς f. ‘ploughshare; plough’ (< IE. \*yog<sup>w</sup>h-ní-s), Lat. *vōmer* n. (es-stem) ‘ploughshare’ and perhaps in Old Irish *fecc* ‘tooth’ (as if from Celtic \*vegnā f. and IE. \*yeg<sup>w</sup>h-nā-).

4.5. Gmc. \*tungōn f. (n-stem) ‘tongue’ (Goth. *tuggō*, OIcel. *tunga*, OE. *tunge*, E. *tongue*, OSax. *tunga*, OHG. *zunga*, G. *Zunge* f. ‘tongue’; ЗАЛИЗНЯК 1963: 156, No. 14.15) < PGmc. \*tung<sup>w</sup>ō f. (ō-stem, remodelled later as an ən-stem) < IE. \*d̥yng̥hyā f. ‘tongue’ (RINGE 2006: 81, 90–91). The oxytonesis is confirmed by OInd. *jihvā* f. ‘tongue’ (MONIER-WILLIAMS 1999: 422; LUBOTSKY 1988: 103). Other related terms (e.g. OLat. *dingua*, Lat. *lingua* f. ‘tongue’, Avest. *hizū-* and *hizuvā-* f. ‘id.’) are accentologically irrelevant.

4.6. Gmc. \*lungraz adj. ‘swift’ (cf. OSax. *lungar* ‘powerful’, OE. *lungre* adv. ‘quickly, soon’; RINGE 2006: 91, 92) < PIE. \*h₂l̥ng<sup>w</sup>hrós adj. ‘light (in weight)’, cf. Gk. ἐλαφρός adj. ‘light, nimble’. All the adjectives which end with the suffix \*-ro- demonstrate the oxytone stress.

5. POSSIBLE EVIDENCE FOR -g<sup>w</sup>h- > GMC. -w-

5.1. Gmc. \*snaiwaz m. ‘snow’ (cf. Gothic *snaiws*, ON. *snaer*, OE. *snaw*, E. *snow*; OSax. *sneo*, OHG. *sne(o)*, G. *Schnee*; ЗАЛИЗНЯК 1964: 189, No. 29.31) < IE. \*snóig<sup>w</sup>hos m. ‘snow’ (RINGE 2006: 107; NIL 2008: 622–625), cf. Skt. *snéha-* m. ‘Schleim, Klebrigkeits’ (MAY-RHOFER 1996: 772); PSl. \*snēgъ (gen. \*snēga) AP a ‘snow’ (cf. Pol. *śnieg*; SC. *снēг*, *снēга*; Slovenian *snēg*; Russ. *снег*, *снēга*; DERKSEN 2008: 457); Latv. *sniegs*, Lith. *sniēgas* ‘snow’

2 AP in a north-western Žemaitis dialect, but 4 AP (of secondary origin) is more usual in the dialects and in the standard language (ILLICH-SVITYCH 1979: 102, Sect. 44).

5.2. Gmc. \**sarwaz* m. ‘roach, *Rutilus rutilus* L.’ (cf. OSwed. *sarv*, Swed. *sarv*, *surf*) < IE. \**sorgʷhos* m. ‘a kind of fish’, cf. Greek (Herodianus) ὄρφος m. ‘a sea-fish’. See also Russ. *копóга* f. ‘roach’ (< PSI. \**sorgʷhā* f. ‘a kind of fish’).

5.3. Gmc. \**rawiz-* n. (*es*-stem) ‘reed’ and \**rawizaz* m. (secondary *o*-stem) ‘id.’ (cf. Goth. *raus* n., ON. *reyr* n., OHG. *ror* n., MLG *ror*; also ON. *reyrr* m. *a*-stem ‘reed’, OHG. *orra* f. *jō*-stem ‘id.’; DE VRIES 1977: 443, LEHMANN 1986: 282) < PIE. \**h₂rógʷhes-* n. (*es*-stem) ‘reed’, cf. Gk. ὄρφος n. (*es*-stem) ‘reed used for thatching houses’ (< \*ὄρόφος). A related form is seen in Slavic \**rogozjь* ‘reed’ (< IE. \**h₂rógʷh-*).

5.4. Gmc. \**newran-* n. or m. (*n*-stem) ‘kidney’ (OICEL. *nýra* n., OSWED. *niure*, ME. *nere*, MLG. *nere*, OHG. *nioro* m.; ЗАЛИЗНЯК 1964: 217, No. 32.21; SEEBOLD 1967: 117; DE VRIES 1977: 413) < IE. \**négʷhron-* (POKORNÝ 1959: 318), cf. Praeneste Latin *nefrōnes* m. pl., Lanuvian *nebrundines* ‘kidneys’ (MULLER 1926: 285–286). The *n*-stem neuters are always barytone both in Sanskrit and Greek (LUBOTSKY 1988: 108, 147; RISCH 1974: 59–62). Thus by an accentological analogy the Germanic appellative *neuran-* (representing a neuter, cf. OICEL. *nýra* n. ‘kidney’) had to possess originally the barytone stress (IE. \**négʷhron-*). The *o*-stem appellative, attested in Gk. νεφρός m. ‘kidney’, usually in pl. ‘kidneys’ (< IE. \**negʷhrós*), presents an oppositional accentuation.

At present I can find only these 20 items. For other, but accentually or etymologically irrelevant, examples, see SEEBOLD (1967: 105–130; 1980: 450–484) and POLOMÉ (1987: 303–310).

On the basis of the above-mentioned lexical material it should be concluded that the initial IE. \**gʷh-* yields Gmc. \**g-* in the position before accent, \**w-* elsewhere. In the medial position the continuants of IE. \**gʷh* show the same distribution (i.e. -*g-* before accent, -*w-* elsewhere).

The development of IE. \**gʷh* appear to be analogous to the development of the Indo-European voiceless consonants in Germanic (e.g. IE. \**k* yields Gmc. \**h* initially, but both \**h* and \**g* in the intervocal position). The last process is explained by the so called Verner’s law (see COLLINGE 1985: 203–216). It seems highly probable that the double reflexes of IE. \**gʷh* were caused by a phonological rule similar to Verner’s law (G. *das Verner’sche Gesetz*).

## CONCLUSIONS

The above analysis of the Germanic lexical material shows clearly that the double representation of IE. \**gʷh* in Proto-Germanic is determined by position of the Indo-European and Proto-Germanic stress. Generally, if one compares the Germanic forms and their Indo-European prototypes from the view-point of Indo-European accentuation, it is easy to prove that IE. \**gʷh* is reflected as Gmc. \**g* before stress (see No. 2.1–5; 4.1–6) and Gmc. \**w* elsewhere (see No. 3.1–5; 5.1–4).

## ABBREVIATIONS

adj. – adjective, cf. – confer (compare), e.g. – exempli gratia, f. – feminine, id. – idem, m. – masculine, n. – neuter; No. – number, pl. – plural, PN – personal name, Sect. – section.

Languages: Att. – Attic (Greek), Dan. – Danish, E. – English, Far. – Faroese, G. – German, Gk. – Greek, Gmc. – Germanic, Goth. – Gothic, Gk. – Greek, Icel. – Icelandic, IE. – Indo-European, Lat. – Latin, MHG. – Middle High German, MLG. – Middle Low German, Norw. – Norwegian, OE. – Old English, OFris. – Old Frisian, OHG. – Old High German, OIcel. – Old Icelandic, OInd. – Old Indic, OIr. – Old Irish, ON. – Old Nordic, OSax. – Old Saxon, OSwed. – Old Swedish, PSl. – Proto-Slavic, Russ. – Russian, Skt. – Sanskrit, Swed. – Swedish, Toch. A – East Tocharian, Toch. B. – West Tocharian or Kuchean.
